* pro forma statistics

Investment strategy

To focus on obtaining regular income while giving special attention to capital preservation in periods of rising yields and appreciation of the Euro.

Investment philosophy and process

To provide sustainable asset management, generating superior performances versus the domestic bond market through increased international diversification, without increasing risks thanks to dynamic risk management of interest rates, issuer categories and currencies. This dynamic risk management is provided by a multifactorial model (1875 MAP).

Investment policy

Bond markets of developed economies have surged by 1.03% in July following a decrease of commodities prices and without any salary pressure in the US. We note the strong appreciation of EUR-denominated bonds (1.82%) in the wake of the sensitive increase of peripheral papers' prices. While instruments in GBP (1.69%), NOK (1.35%), SEK (1.30%), AUD (1.52%) and CAD (1.46%) have strengthened, investments in USD (0.64%) and CHF (0.32%) posted small gains. Emerging debt has gone down, being penalized by important capital outflows. On the currency market, USD has reinforced, CHF and commodities-sensitive currencies have been weak.

The fund has appreciated by 0.81% against 1.33% for its benchmark. This underperformance is mostly due to under-duration of EUR-denominated bonds and overweight of the reference currency.

Despite increased overvaluation, the global exposure to bonds and the average portfolio duration remain stable, bonds remaining an attractive alternative to cash in the absence of inflation. Allocation to bonds in CHF and AUD is still overweight due to enduring deflationary pressures for the former and to deteriorating growth expectations for the latter. Exposure to USD- and GBP-denominated bonds is neutral as prices indexes are expected to step back. Investments in JPY and in to a lesser degree in CAD keep on being underweight. Due to acceleration of growth in the Euro zone, allocation to bonds denominated in EUR have been once again lowered and is now sensitively underweight. Regarding currency exposures, the overweight of EUR vs. USD must be reduced due to the increase of yield differential between the US and the Euro zone. The overweight of CHF vs. EUR remain stable, the reduction of the EUR risk premium being balanced by the reduction of CHF overvaluation.

Investment objectives

Financial : to outperform the benchmark on an investment time horizon of two years to provide excess return and yield complementary to the domestic bond market.

Economic : to optimally allocate capital by integrating ESG criteria for the selection of issuers.

Risk profile

Low risk, ensured by a constant and asymmetric distribution of returns generated by a reduced exposure to interest rate risk during rising cost of capital periods and a concentration on the EUR during declining foreign currencies periods.

About 1875 FINANCE

1875 FINANCE is positioned as both an innovative company and a guardian of the Geneva financial tradition, building its difference on three business lines, institutional asset management, private banking and multi family office. As a PRI signatory, 1875 FINANCE provides effective sustainable asset management integrating environmental (E), social (S) and governance (G) criteria for all asset classes. Using a unique proprietary model, 1875 MAP, dedicated to dynamic tactical allocation management, and relying for the selection of titles on the analysis of partners who are pioneers and key players in sustainable investing, 1875 FINANCE offers to pension funds both balanced management and overlay services, but also global equity and global bond mandates.
