MAP FUND MANAGEMENT
SUSTAINABLE GLOBAL BONDS (CHF) - I

ISIN / TELEKURS: LU1121107129 / 25648374

NAV 28.02.2017: CHF 98.83

Investment profile

Asset class : global bonds
BM : 60% Citi WorldBIG TR, 40% SBI TR - currency: 95% CHF
Reference currency : CHF
Minimum credit rating : «Investment Grade» (BBB-)
Investment style : long-only, active, fundamental
Type of investment : sustainable, integrating ESG criteria
Approach : top down and bottom up
Subscription / Redemption : D+2 / D+5
Minimum investment : CHF 100'000
Dividend distribution : re-invested
Management fees / TER (p.a.) : 0.5% ; 1.09%
Domicile : Luxembourg
Registration : Switzerland, Luxembourg, France
Representative / Correspondent : Carnegie Fund Services / BNP Paribas
Legal form : SICAV - UCITS - open fund
Manager : 1875 FINANCE, Switzerland - FINMA regulated
Custodian bank : Pictet & Cie (Europe) S.A.
Administrator / transfer agent : FundPartner Solutions (Europe) S.A.
Auditor : Ernst & Young, Luxembourg
Inception date : December 15, 2014

1875 FINANCE

Retrospective & perspective

During February, government bond markets in developed countries (0.8%) benefited from a technical upturn fostered by position hedging. As a result of further capital inflows, emerging loans (2.3%) further appreciated. Within advanced economies, GBP (3.3%) and to a lesser extent EUR (1.6%) bonds gained the most, while their counterparts in JPY (0.4%), USD (0.5%) and CHF (0.5%) underperformed. In terms of credit, we note, through the evolution of CDS, a further reduction of CDS reduction, particularly on bank debtors, with the exception of the high-yield segment.

During the period under review, the environment on the foreign exchange markets was characterized by the weakness of the EUR against all currencies, particularly the USD (-1.7%). On the other hand, emerging currencies rose again (RUB 2.8%, BRL 1.8%, TWD 1.8%). The AUD (1.4%) and the CAD (-1.8%) moved in the opposite direction. We note the renewed firmness of the yen (0.9%) vis-à-vis the greenback. In Europe, the EUR declined against the GBP (0.4%) and the CHF (0.4%).

The fund appreciated by 0.43% vs. 0.68% for its benchmark. This underperformance results from the shorter duration on the portfolio.

Due to the gradual reduction of available productive resources and the increase in the banking multiplier, yields, which are now undervalued, will continue their upwards trend during the first half of the year. While remaining at historically low levels, inflation will gradually recover by evolving in a differentiated manner according to the monetary zones. The combination of rising real interest rates and rising inflationary pressures advocates for a decline in bonds. As a result, it requires a lowering of both their weighting and duration in order to underexpose them more significantly and to reduce, in a complementary manner, the sensitivity of the portfolios to interest rates. In terms of currency allocation, the divergence in performance will falter as a result of the synchronized recovery in the global economy. Against this backdrop, excess exposure to AUD borrowings is reduced in a trend towards neutrality and the underweighting of CHF and CAD commitments is increased. Investments in GBP, EUR and JPY are more markedly underexposed due to their valuation levels, which remain very high. USD bonds remain underweight in expectation of the acceleration of economic activity in the United States and the gradual normalization of US monetary policy. Given the expected rise in real interest rates during the first half of the year and the more gradual recovery in inflation, inflation-indexed bonds (TIPS) must remain underweight and do not yet present an attractive alternative to fixed-income commitments. In terms of debtor categories, the overweighting of corporate bonds is strengthened by an increase in exposure to European private bonds and, to a lesser extent, to their US counterparts. Despite their recent decline, credit premiums will continue to decrease as a result of the significant improvement in corporate financial positions, particularly within the banking sector.

The greenback may at the current level appreciate only moderately and should therefore be only slightly overweighted. EUR exposure can be increased relative to the CHF to reach a moderate overweighting.

Sources of return (in order of importance)

90%	- Market allocation - Duration allocation - Currency allocation - Weighting issuer categories
10%	- Issuer selection - « Yield enhancement »

Investment strategy

Generate regular income while giving special attention to capital preservation in periods of rising yields and appreciation of the Swiss franc.

Investment philosophy and process

Provide sustainable asset management, generating superior performances versus the Swiss bond market through increased international diversification, without increasing risks thanks to dynamic risk management of interest rates, issuer categories and currencies. This dynamic risk management is provided by a multifactorial model (1875 MAP).

About 1875 FINANCE

1875 FINANCE is positioned as both an innovative company and a guardian of the Geneva financial tradition, building its difference on three business lines, Institutional Asset Management, Private Banking and Multi-Family Office. As a PRI (Principles for Responsible Investments) signatory, 1875 FINANCE provides effective sustainable asset management integrating Environmental, Social and Governance (ESG) criteria for all asset classes. Using a unique proprietary model, 1875 MAP, dedicated to dynamic tactical allocation management, and relying for the selection of securities on the analysis of partners, who are pioneers and key players in sustainable investing, 1875 FINANCE offers pension funds both balanced management and overlay services, but also global equity and global bond mandates.
