Retrospective & perspective

During December, government bond markets in developed countries (0.10%). Emerging loans (1.7%) recovered following the sharp fall observed during the previous period. Within advanced economies, CAD (-0.8%) and JPY (-0.7%) bonds fell the most. USD-denominated assets consolidated, while Euro investments recovered somewhat. On the credit side, we note the additional lowering of credit premiums.

During the period under review, the foreign exchange environment was characterized by the rebound in emerging currencies (BRL 4%, RUB 4.4%), encouraged by new capital inflows and by the continued rise of the USD vis-à-vis developed currencies (JPY 2.20%, EUR 0.64%, AUD 2.5%, CAD 0.3%) as a result of divergences in monetary policy. In Europe, we note the further recovery of the GBP (0.75%) and the continued strength of the CHF (0.56%).

The fund depreciated by -0.30% vs. -0.16% for its benchmark. This slight underperformance is mainly due to the hedging costs and the lower duration compared to the strategic allocation.

After having depreciated considerably throughout December, bond markets remain oversold but are still burdened with expensive medium-term valuation levels. Economic conditions remain unfavourable to bonds due to the expected strengthening of nominal growth. On the monetary front, fixed-income investments should be kept underweight, with average durations below those of the benchmarks. During rebound phases, they will be reduced in a complementary manner. In terms of currency allocation, AUD and to a lesser extent CAD and NOK loans benefit from less favourable economic indicators. Their GBP and EUR counterparts are the most strongly underexposed. Commitments in USD and JPY remain moderately underexposed. CHF investments are more moderately underweighted.

Inflation-indexed bonds (TIPS) in yen remain an alternative to their fixed-rate counterparts. Following their recent decline, TIPS in USD are becoming more attractive and will prove progressively more resilient than fixed-income commitments. The relative attractiveness of USD-denominated corporate bonds has increase. In terms of debtor categories, it will therefore be necessary to increase the overweighting on corporate bonds.

The widening divergence in monetary policy between the United States and the Eurozone, as well as the growing scarcity of international liquidity, advocate for a further rise of the USD despite its strong overvaluation. The overweighting of the greenback relative to the Euro should therefore be further emphasized.

Investment strategy

Generate regular income while giving special attention to capital preservation in periods of rising yields and appreciation of the US Dollar

Investment philosophy and process

Provide sustainable asset management, generating superior performances versus the domestic bond market through increased international diversification, without increasing risks thanks to dynamic risk management of interest rates, issuer categories and currencies. This dynamic risk management is provided by a multifactorial model (1875 MAP).

About 1875 FINANCE

1875 FINANCE is positioned as both an innovative company and a guardian of the Geneva financial tradition, building its difference on three business lines, Institutional Asset Management, Private Banking and Multi-Family Office. As a PRI (Principles for Responsible Investments) signatory, 1875 FINANCE provides effective sustainable asset management integrating Environmental, Social and Governance (ESG) criteria for all asset classes. Using a unique proprietary model, 1875 MAP, dedicated to dynamic tactical allocation management, and relying for the selection of securities on the analysis of partners, who are pioneers and key players in sustainable investing, 1875 FINANCE offers pension funds both balanced management and overlay services, but also global equity and global bond mandates.
